

RFID Cabinet Dispenser

RFID Cabinet controls access to inventory

Linen – Scrubwear – Workwear – Medical Packs – Uniforms – Etc

RFID Cabinet is a cost-effective solution for tracking and controlling the issue of linen, garments, scrubwear, workwear, aprons, uniform items, medical kits, etc...

RFID Cabinet is an ID-card operated cabinet incorporating RFID processing technology. RFID Cabinet will track every item removed by staff, and can limit the number of items staff can access before having to return soiled.

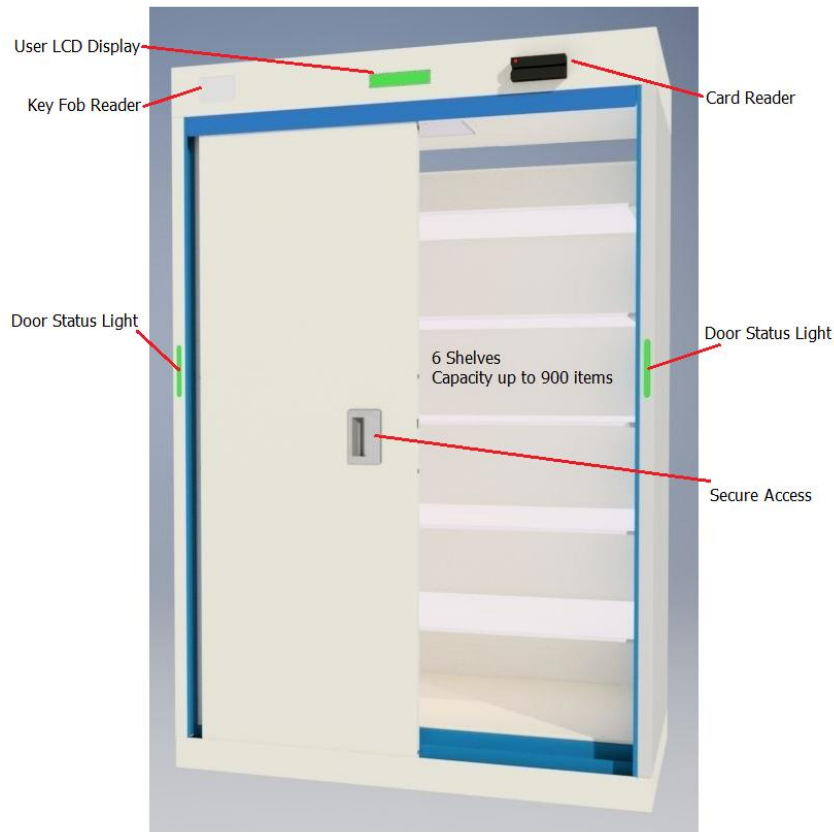

RFID Cabinet can only be unlocked with an authorized staff ID-card. Staff using their ID-card to unlock the cabinet can remove the particular item(s) they require.

When the door is re-closed, RFID Cabinet will automatically scan and register all items remaining within the cabinet – items removed are recorded against the applicable staff account.

Supplied management software is used to authorize staff and track items removed, etc.

Our optionally available UHF Receiver unit can be used with the cabinet to enforce credit control, crediting staff when they return soiled items in their possession.

RFID Cabinet Dispenser Specification

- RFID Cabinet is only accessible with a staff ID-card - supports all types of site ID-card
- Automatic tracking of items removed by staff, and items refilled by operator
- Zero maintenance construction, robust design with low cost of ownership
